Purpose, access and request

Applicant: Axel Viking Cornelius, individual developer in Sweden. No registered company or external paying users.

Cutkoi is a creator research and concept-planning prototype. Its intended users are individual content creators. Current access is limited to the developer and controlled testing; subscriptions and credit packs are future plans.

Public review access: https://cutkoi.com/review
Privacy: https://cutkoi.com/privacy | Terms: https://cutkoi.com/terms
Contact: axelcornelius93@gmail.com

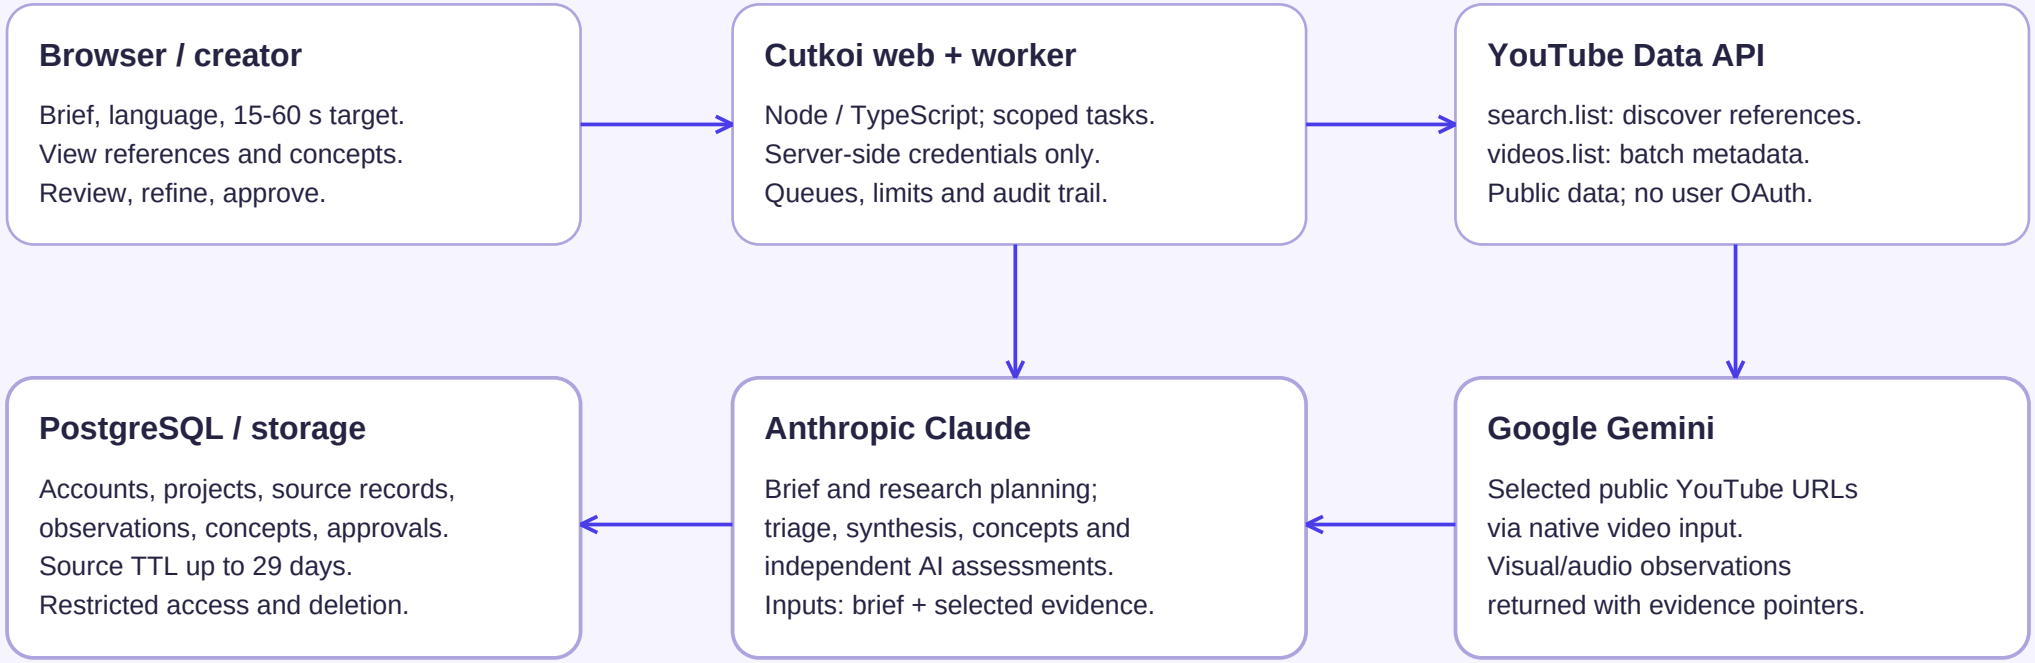

Google Cloud project: cutkoi / **722849009926**.
Requested: 1,000 search.list requests per day. Keep the existing 10,000-unit daily bucket for other methods. No additional videos.insert allocation; no upload endpoint is used.

Why the quota is needed: a bounded 30-brief evaluation compares research-assisted concepts and their evidence. A completed representative case used 20 searches and 2 metadata calls. The configured ceiling is 32 searches per research run. Thirty cases therefore require approximately 600 searches, with an upper bound of 960 before any separately authorised reruns. These are requests, not thousands of videos or 6,000 searches.

The requested limit supports controlled evaluation bursts, not a claim of 1,000 daily customers. Runs are deduplicated, logged and bounded by per-run search and cost reservations. Metadata requests are batched. Completed evidence is reused where valid; testing stops when quota or spend cannot safely be reserved.

Architecture: current research route

Solid boxes: implemented components. Hosting status and planned functions are explicitly distinguished.

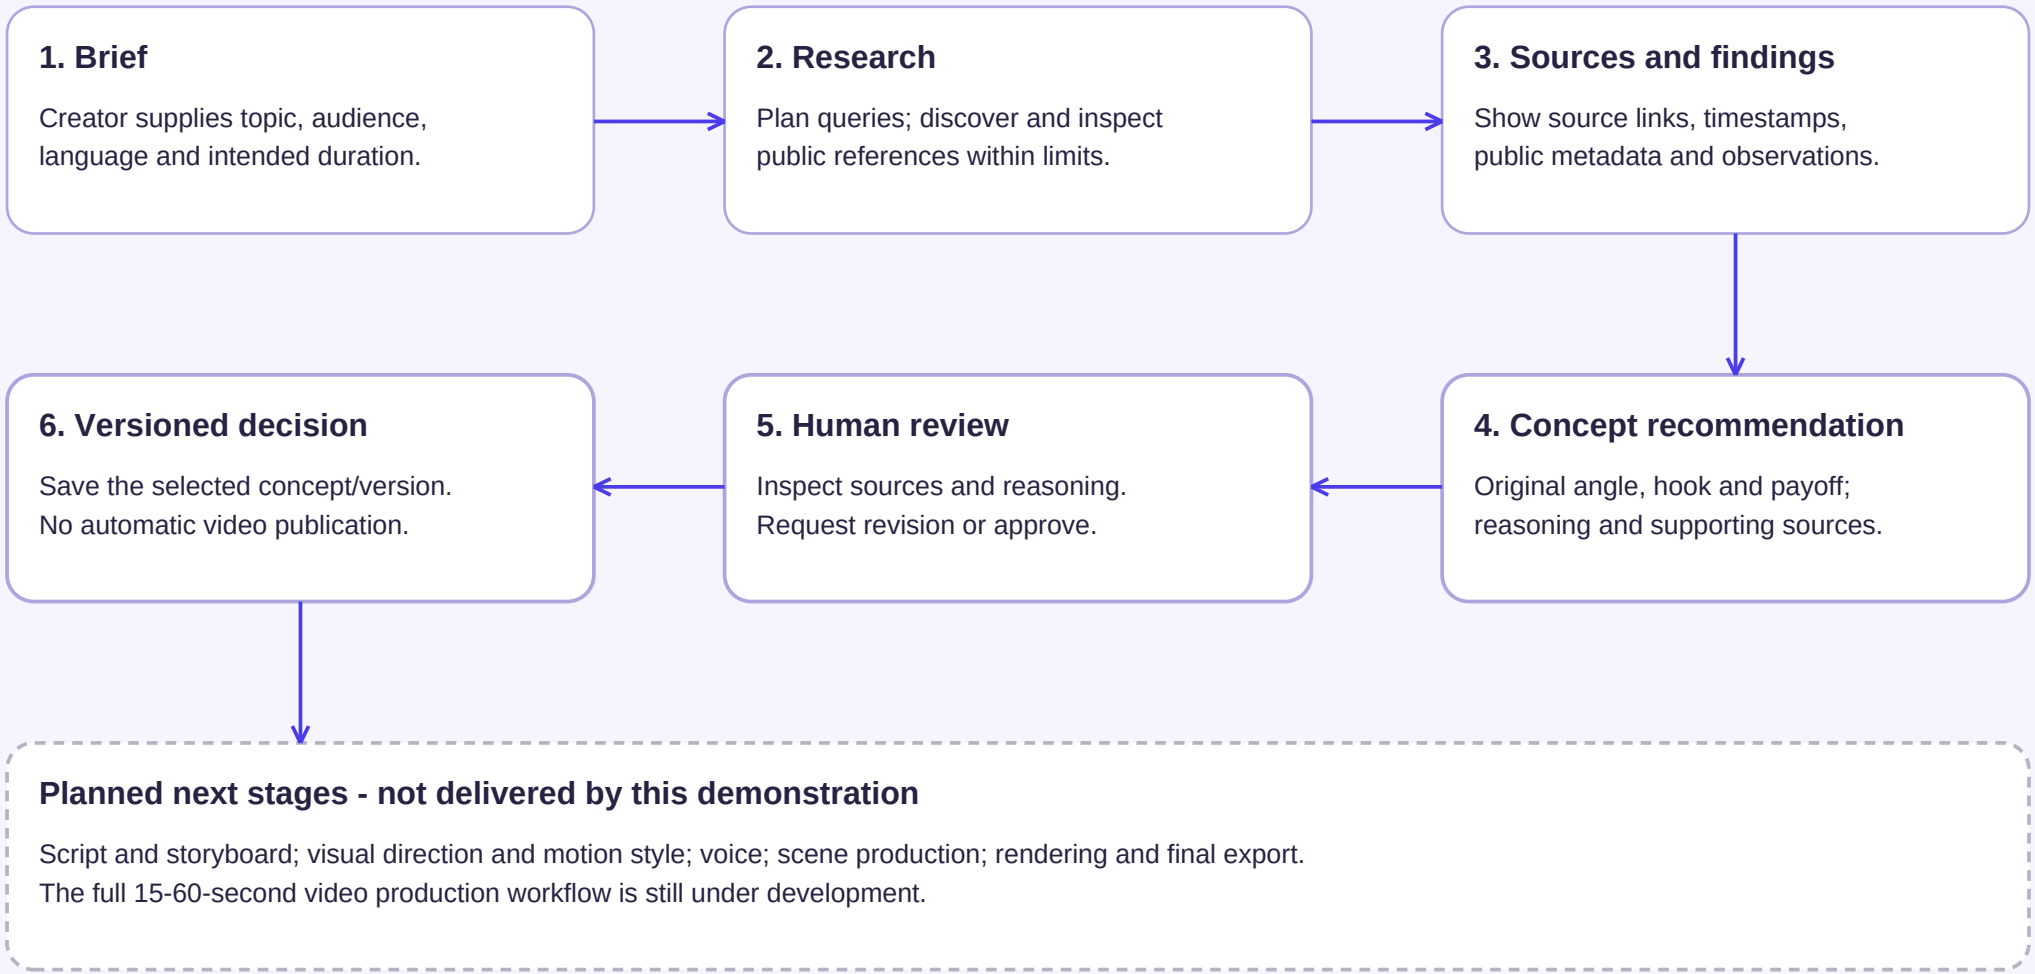

Current evidence: real local research + concept run with live APIs. Railway staging hosts an earlier build. Railway production hosts public information, policies and this demonstration; the full prototype is not publicly launched.

Cross-service permissions remain an open review point. Native Gemini URL support proves technical access, not permission under all applicable terms. Cutkoi does not download/rehost full reference videos or full transcripts. No private analytics, automated YouTube uploads or model training are part of this route.

User flow and decision points

Current prototype workflow, followed by clearly marked future production stages.

Evidence and quota arithmetic

One completed real run is demonstrated. This does not certify the entire Phase 8 evaluation.

Example brief: Explain why metal feels colder than wood in the same room.
English; 45-second target. Completed 4 November 2026. Five candidate concepts; recommendation: **Your Hand Is the Thermometer That Lies**.

YouTube search.list	20 requests
YouTube videos.list	2 batch requests
Gemini reference inspections	10 calls
Claude research / concept / assessment	15 calls
Cost recorded for this completed campaign	$1.396818 at the recorded current price table; conservative accounting $1.533984

Cost figures are calculated from captured usage and price tables, not a provider invoice or proposed customer price. No new paid research run was triggered to create this walkthrough.

Recording: https://cutkoi.com/review
The silent browser recording inspects the saved output of the completed run, including research completion, source details, concept reasoning and reload. It is not a fabricated live progress sequence. Local test credits shown in the UI are fixtures.

Data handling and review question

Policy URLs are public. Current prototype controls are distinct from contractual clearance and launch readiness.

Collection and purpose
Public source identifiers, links, titles, channel names, timestamps, thumbnails, durations, public statistics and availability/licence fields support reference discovery and original concept planning. No private channel analytics or YouTube account credentials are requested.

Storage and deletion
Source metadata and dependent research artifacts have a maximum 29-day lifetime; dependent artifacts inherit expiry. Operational logs/read manifests normally expire after 30 days. Account/project deletion requests go to the developer. Provider-side retention is separate. No full reference videos or full transcripts are rehosted.

User control and public notice
Public privacy and terms pages describe AI processors, source use, necessary prototype sessions and deletion contact. The prototype is not open for public registration. Policy agreement must be enforced before external users receive access; this packet is not a claim that public onboarding is already launched.

Question for YouTube review (O09)
Please assess whether using YouTube Data API discovery/metadata together with Gemini native public-YouTube-URL analysis for qualitative creative research is permitted for this proposed client, including standard YouTube-licence videos. We seek clarity about cross-service content analysis and derived qualitative observations, not permission to download/rehost footage or present proprietary engagement metrics. No contractual clearance is claimed.

Terms and reviewer access

Published terms summary. The complete version remains available at https://cutkoi.com/terms.

Cutkoi is an individual development project, not a publicly launched paid service. Current prototype access is by invitation for adults aged 18 or over. Users must agree to the privacy policy and terms before using prototype features.

By using Cutkoi's YouTube-related features, users agree to be bound by the YouTube Terms of Service: https://www.youtube.com/t/terms. Google Privacy Policy: https://policies.google.com/privacy. Cutkoi is not affiliated with, endorsed by or sponsored by YouTube or Google.

Source material remains the property of its respective owners. Public availability does not automatically grant reuse rights. AI observations and recommendations require human review and do not guarantee accuracy, originality, views or revenue. Users must not infringe rights, misuse personal data, bypass security or evade quotas.

The combined standard-licence public-reference AI analysis route remains a pre-launch contractual review question. Technical success is not represented as approval. Planned script, storyboard, voice and finished-video features are not represented as complete.

No demo password is supplied because the working research prototype is local and uses email-link sign-in. The public page provides the real recorded workflow and supporting evidence. A supervised walkthrough can be arranged through axelcornelius93@gmail.com if required. The existing Railway staging build is older than the demonstrated research build.
